

Body Hotspot Highlight Plugin

Features

- Upload and manage a base body image in the WordPress admin.
- Click-to-add hotspot markers with percentage-based positioning.
- Enter a title and description for each hotspot.
- Shortcode [body_hotspots] renders an interactive hotspot map.
- Backend controls for popup design: size, theme, border radius, animation.
- Built for WordPress 6.x+ and PHP 8.2 compatibility.

Benefits

- Intuitive UI – no coding required for hotspot creation.
- Customizable popups to match site aesthetics.
- Responsive design ensures correct positioning on all devices.
- Engaging animations draw user attention.
- Lightweight and minimal performance impact.
- Ideal for medical, educational, fitness, and anatomy sites.

User Guide

1. Activate the plugin via the WordPress Plugins menu.
2. Go to 'Body Hotspots' in the admin sidebar.
3. Upload your base body image using the 'Upload Image' button.
4. Click on the image preview to drop hotspots; fill Title & Description.
5. In 'Popup Design Settings', select size, theme, border radius, and animation.
6. Click 'Save Settings' to store your hotspots and design preferences.
7. Place the [body_hotspots] shortcode in any page or post.
8. View the interactive hotspots on the front end and click to see popups.

Tips:

- Ensure your base image retains consistent proportions.
- Adjust popup size and theme to avoid overlapping content.
- Use clear, concise titles and descriptions for clarity.
